

Spirit^{IT} eXLerate supervisory software System integrator benefits

Easy programmable

With our user-friendly and comprehensive Excel-oriented development environment, you will have full control over software configurations.

Training programs

Spirit^{IT} provides engineering training programs, that are tailored to your own specific needs and knowledge level in order to achieve optimum results.

Integrated features

Powerful built-in wizards, tools and features will get you quickly up and running.

Flexible license model

We offer licenses with various editions, sizes in number of I/O tags and operation modes. Each license can be configured to preference and specific project needs.

License editions

Standalone Edition

The Standalone Edition runs as one single Server. It communicates with external equipment via serial or Ethernet interfaces.

Server Edition

The Server Edition runs in a redundant environment and is able to communicate with external equipment. Each Server can run either as Duty or Standby.

Client Edition

The Client Edition computer is additional to the Server Edition and is connected to a duty server via one or more networks. It allows full control and operation, where all data and reports are obtained from a duty server.

License size

Lite	Basic	Standard	Extended	Pro	Plus	Large	Full
75 I/O	150 I/O	300 I/O	750 I/O	1500 I/O	3000 I/O	6000 I/O	32000 I/O

Runtime mode

Runtime Only

The Runtime Only-license has the restriction that the user is not able to modify or inspect the application configuration.

Runtime + Development

This is a full-featured license, where modifications can be made on a runtime system, when the operator has sufficient security rights.

Development Only

This license is available for system integrators who have completed our eXLerate training. The user can modify or inspect the application, but after a built-in timeout of one hour, communications are terminated.

Additional hardware-based protection

eXLerate supports two kinds of dongles: a Maintenance dongle, which allows an engineer to enter the Development mode on a Runtime Only system, and a Runtime dongle, which allows easy transfer of a license from one computer system to another.
